Inventory excel spreadsheet sample

No matter what size business you work in, spreadsheets are a simple and flexible tool for tracking and managing inventory. Even if you're running a small retail outlet, restaurant, or manufacturing business, there's no reason for anyone to rely on manual methods (such as pen and paper!) anymore. Spreadsheets allow you to quickly and easily digitize your inventory and sales systems. That means less waste, no inventory or deficits, and better cash flow! While some large businesses prefer to use specialist inventory software, it can be expensive and too complicated for SMEs. Excel is an affordable and simple inventory management solution. Plus, it's a package that most of your colleagues will already be familiar with. Although inventory software has its advantages, many companies simply don't need the kind of features that come with complex inventory management programs to mind. If you've never created your own system from scratch, however, it's hard to know where to start. Fortunately, there are a huge inventory of Excel templates to get you started. With prescribed formulas and ready-made dashboards, they give you the framework to build an inventory solution that works for your business. Here we've rallied some of the best spreadsheet templates for monitoring inventory levels and managing inventory management. Top stock Excel templates This template from Sheetgo is an automated system that contains linked Excel files. Data flows back and forth between the check-in, check-out, and inventory management spreadsheets automatically, giving you an up-to-date overview of your company's stock levels in the central dashboard. As a result, you can quickly check sold-out items and what goods are available. This linked workflow template gives you: Accurate inventory data. One file for each stage of the process means secure data sharing and less chance of errors. Scalability. Just connect more files to growing your business. Integration. Did you know that you can manage the data of your entire business in linked spreadsheets? Try Sheetgo's automated cash flow, or budget template, and check out our other posts below for more Excel and Google Sheets business solutions. Inventory management has never been easier inventory management apps (such as Inventory Management App and Store Inventory App) are on AppSheet's top 10 most popular sample app list since we started tracking it in 2016. Over the past two years, we've seen tremendous growth in the number of inventory management use cases with no end in sight. The Inventory Management program has the following powerful features: The app automatically enters dates and uses the phone/tablet camera as a Barcode Reader. A daily email report reminds the user to reorder inventory. You can navigate the various inventory items by category. An independent view to see all items to be restarted. Current inventory data connects to sales and purchase data. Why the trend? Businesses and organizations automate data capture by tracking and updating inventory data in real-time through bar code scanning or image capture. What does an Excel spreadsheet have to do with this? Well, it's actually a great starting point for creating an app that automates the inventory management process for you. My recommendation: Start with a spreadsheet and convert it into an app using an app maker platform like AppSheet's. Of course, we're not the only platform out there, but we're the only one who can easily take a spreadsheet and turn it into an app! If you're considering making an inventory program on your own, you'll need to start the process with a spreadsheet and there are some great Excel inventory management templates. The following sections describe some free inventory management excel templates that can help you get started. Of course, you can just use the templates and adopt them in your own business needs, or you can turn them into apps – it's up to you! Common Stock Manufacturing Inventory Warehouse Inventory General Inventory Excel Never Tracked Inventory, but Does It Want to Start Tracking Now? This easy-to-start template has all the major items you need to track. It consists of three tabs: Daily Stocktake records stock coming and go out of a company on a daily basis. Inventory database database you to enter more detailed information about each item. Inventory Inventory Links In and Stock Out of Columns to Daily Inventory, and after you import initial inventory, the spreadsheet will calculate final inventory for you. Of course, to meet your business needs, you can add or update columns. For example, to manage reordering, you can add columns for reorder levels and reorder quantities. Bonus: I changed the above excel template and transformed it into an Inventory Management program. The app enables inventory managers to do the following: Use a barcode scanner to stock up and stock (your phone or tablet can serve as a bar code scanner); Automatically calculate current inventory level; Displays on a view which items need to be restarted; Send Add inventory to email notifications to the purchasing department. Copy the excel template and the app and customize your own way. If you want to learn how the app was made, read this blog. Manufacturing Inventory Excel Template This template works for any business that buys, hosts raw materials, and then sells products to customers. For example, a bike producer, a furniture manufacturer or even an automaker. This template consists of three main tabs - Sales, Parts, and Inventory. Orange columns allow you to enter data. Based on that, the template automatically calculates and fills in data. In the Sales tab, you'll Sales_Quantity and the template calculates Sales quantity per day and sends the data to the inventory table. In the Parts tab, there are parts, Parts_Barcode low stock warning. I suggest you use Parts_Barcode if you have a lot of parts. Barcode allows you to easily scan a part and update its sales and production data. Low inventory alert or Reproduction point tells us that market demand exceeds supply and you need to produce more. In the Inventory tab, the template automatically generates initial inventory and daily inventory. Initial stock equals the previous day's stock. Daily stock is equal to initial inventory plus daily production minus daily sales. Bonus: I've transformed this spreadsheet into a mobile app. You can use it on iOS and Android devices. The app promotes team cooperation manufacturing team, sales team, and warehouse inventory team can simultaneously import data. This allows inventory managers to check inventory data anywhere and anytime. This eliminates data entry errors and data migration errors from paper to computers. This allows sales managers, production managers and inventory scripts to pull historical data, conduct analytics, and make decisions about it. The stock view shows each share group's Daily Inventory and previous day's inventory. Warehouse Inventory Excel Template The template is for companies that have warehouses and place their raw materials in containers of different sizes at different container locations. The template has Tabs - Stock list, inventory menu, and Bin Lookup. The Inventory List tab follows the amount of SKUs in different containers and locations and flags SKUs that to be reordered. The inventory menu tab lets users easily locate where to pick up an item and the amount of item. The Bin Lookup tab serves as a bin database where information such as size, location, and bin number are stored. Bonus: A streamlining stock update program this program can replace paper recording of product inventory, for faster input, real-time analysis of stock levels and alerts when items need a check or reorientation. Features include: Barcode and NFC Tag scanning for quick inventory modifications; Custom formats to highlight popular products and those with a low inventory level; Email alerts about low inventory products; Cards on receipt and shipping. What's next? These are just a few of my favorite Excel templates for inventory management. You can use it like OR easily create your own apps. Check out our sample inventory management apps here and here—and note, they're all made of spreadsheets! If you have other favorite Excel templates, let me know by submitting a comment or tweet. I'm always looking for templates to add to this list! Related stories: Ready to take your inventory tracking to the next level? Copy the following app and customize in your own way! Way!
